## **CHRISTO-LUBE**

Christo-lube can be used in all SURVIVAIR equipment in place of Krytox oil, Krytox grease and Silicone grease. It complies with all NFPA functional requirements and temperature ranges.

SURVIVAIR recommends that you use this lubricant in all NFPA units in place of Krytox oil.

SURVIVAIR sells this lubricant in ½ cc blisters, P/N 910452, which will lubricate one or two units and in a ¾ ounce container, P/N 910699, large enough for eight to ten overhauls.

Follow the same methods for lubrication as you did with the other lubricants, these other lubricants can still be used if desired.
