

## **Worker Compliance – Part of the Honeywell Safety Suite**

Real-time visibility on workers' readiness for safe work

# Are your workers ready – in terms of equipment and training – to safely perform the job at hand?

If you're like many safety managers or operations leaders, you may struggle to answer that question with confidence. It's often because key information about equipment inspections, employee training and other safety compliance factors is buried in spreadsheets, databases and paper-based systems.

That's why Honeywell created Worker Compliance, a cloud-based tool that gives you real-time visibility — in one centralized interface — on your workers' readiness to do safe work.

With this software, part of the Honeywell Safety Suite, you can quickly and easily see:

- The compliance status of each piece of equipment
- The worker assigned to it
- The worker's training status
- And more.

### An accurate picture of compliance at your fingertips

With in-the-moment visibility — available from a web browser, whenever you need it — you can prevent compliance issues that cause costly downtime for your workers and equipment. All while managing enterprise risk and building worker confidence.

In addition to creating value for the enterprise, Worker Compliance creates value for you as a safety manager, freeing you up from burdensome administration. **So you can spend more time making workers safe — instead of making spreadsheets.**

Minimize your safety incidents — and your paperwork.

**Worker Compliance** is part of **Honeywell Safety Suite**, a software-as-a-service platform for safety information management.

# Bringing new value to your fall protection equipment – with real-time visibility on workers' readiness for safe work

With Miller® fall protection harnesses and other personal protective equipment (PPE) from Honeywell, you're not just investing in safety. You're also investing in better visibility on that safety – with the help of our Worker Compliance software. So you can ensure compliance, prevent incidents and reduce downtime.

## A lot of intelligence in a little tag.

Several Honeywell PPE products come with an integrated radio frequency identification (RFID) tag or barcode that is packed with information from the Honeywell product database.

When you scan this tag or barcode, the data is imported seamlessly into the Worker Compliance software, so you can see critical information like:

- Item description
- Step-by-step inspection instructions
- Recommended inspection frequency

You can then use the software to assign equipment to different workers and sites. And if our recommended inspection protocol is different from your policy, you can easily edit the information to meet your requirements.

## One log-in. One source of truth.

With a centralized online repository of your PPE, you have one source of truth for all inspections.

### Have equipment from other manufacturers?

Worker Compliance guides you in manually adding those items. So you have a consolidated, centralized view.

**Need to inspect a harness?** Simply scan the RFID tag to view the inspection history for that piece of equipment.

**Notice that the stitching is starting to fray on your lanyard?** Input your observations directly into the software and upload a photo. So at the next inspection, whoever is doing the check can see the notes and take appropriate action.

**Worker Compliance** is a living record of safety: an always up-to-date audit trail for every asset and worker.

# RFID technology makes it easy to create a centralized equipment inventory in the software.

Inspection History

Inspection Action/Result

KEY FEATURES:	APPLICATIONS:
Optimized User Interface	Intuitive, easy to use, and accessible on mobile devices.
Visual Data Management	Actionable data in a format that is easy to digest. Quickly enables faster, more accurate decision making.
Email Alerts and Notifications	Proactive approach to action upcoming / current non-compliance indicators.
RFID / Barcode Scanning	Scan any equipment / PPE with either RFID tags or barcodes. Ability to scan multiple assets in a single operation.
Automatic Imports of Asset Data for Honeywell RFID tagged PPE.	Seamlessly imports the serial number, item description, recommended steps for inspection, recommended inspection schedule and other key information from the Honeywell product database
Offline Inspections on Mobile Device	Mobile Application on Android to manage equipment / PPE inspections (sequential, non-sequential) at locations with no internet connectivity.
Bulk Data Management	Microsoft Excel templates to facilitate efficient import of information associated with multiple workers, multiple assets and multiple trainings.
Document Management	Associate certifications with workers, specification sheets with assets / equipment and roster sheets with trainings.
Multiple Sites / Locations Management	Manage compliance across multiple sites in the organization using a single subscription.
Reports and Excel Compatible	On Demand Reports in Microsoft Excel and scheduled Email reports.
Self Service Administration	Manage Job Functions, Sites, Product Families and Inspection Templates to align with the current operational processes.
Secure Cloud Environment	Reliable data storage with 24/7 access from any internet connection; nothing installed and no consumption of local IT resources.
Product Support	Professional support by Honeywell via Email.

## Record equipment inspections in real time – in your office or on the floor – so you always have an up-to-date view of compliance.

Since Worker Compliance is cloud-based software, you can access it whenever you like – on your desktop computer or mobile device, in your office or on the manufacturing floor.

That means you have the flexibility to take it with you wherever you go, performing inspections and recording observations on the spot. No more going back and forth between equipment rooms and spreadsheets.

The software also offers offline mode for some mobile devices, enabling you to log inspections at remote facilities – even if you don't have an internet connection.

## See a real-time dashboard of inspection and training status.

For each task, an industrial worker needs the right training, plus equipment that has been inspected for safety requirements.

- Has the harness been inspected on schedule?
- Which worker is assigned to it?
- Which workers are certified to use it in a confined space application?

Worker Compliance puts this kind of data at your fingertips with easy-to-read dashboards, so you can quickly and accurately determine worker readiness.

### Improve your partnership with operations

Is a team leader organizing a work group for roof maintenance? With Worker Compliance, you can easily tell which workers are certified for the job. You can even give team leaders access to the software so they can get compliance data more quickly and improve their productivity.

### Optimize your day-to-day compliance activities

Which equipment inspections are due this week? Which workers are less than 100 percent compliant on their training?

**Put away your spreadsheets and whiteboards! Instead, open Worker Compliance for an up-to-date view of your compliance status – for individual workers, teams and entire sites. The software even sends you automatic notifications on upcoming equipment and training requirements, so you're always a step ahead.**

Training & Results

Job Site Compliance

# Automate scheduling, signups and other parts of training, making compliance easier for workers and for you.

Are you spending hours setting up safety training curricula for different employee tasks? And then scheduling courses and confirming attendance? Worker Compliance streamlines these activities.

When you add a worker to the software, you can associate that worker with certain job tasks, PPE and training, so you can easily reference the requirements and status for each worker. You can even give employees permission to access the software so they can see their compliance status, view the training schedule and register for classes.

## Streamline your employee onboarding

To further simplify your systems, our integration experts can help you link Worker Compliance to your learning management system and human resources database. So whenever a new worker joins your organization, that employee can be seamlessly added to the Worker Compliance software.

## Flexible, scalable and affordable

In addition to tracking the compliance of your PPE, you can use the Worker Compliance software to track the compliance of other assets — from fire extinguishers and jackhammers to certain areas of your plant.

For example, what safety hazards are in Zone 1? How often does it need to be inspected? Worker Compliance makes it easy to add this kind of asset to the software, define the procedures, and attach photos or other documentation — so it becomes part of your compliance tracking. All in one centralized online location.

## An easy decision

Worker Compliance is remarkably affordable — at a low price per worker per year. And unlike on-premises software, there's no installation or maintenance. Instead, just access Worker Compliance online, and expand it across the organization as your needs evolve.

- Fire Extinguishers
- Ladders
- Jackhammers
- Smoke Detectors
- Certain Areas of your plant
  - Control Room
  - Tool Crib
  - Shipping
  - and more

## Prevent compliance pitfalls

According to the National Safety Council, falls are one of the leading causes of worker injury and death — and they're often due to breakdowns in compliance tracking. For example, fall protection equipment may not be properly inspected for wear and damage, employees may not receive the proper training for working at heights, or they may receive the wrong equipment for the job.

**Worker Compliance software, offered as part of the Honeywell Safety Suite, enables you to prevent these pitfalls — with real-time visibility on equipment inspections, training status and workers' readiness for safe work.**

## **Another way Honeywell is connecting and protecting your workers – wherever they're at risk.**

As a global leader in safety technology, Honeywell is developing connected solutions that give you real-time safety awareness, so you have the right information at the right time to make better decisions. And Worker Compliance is part of that focus. With real-time visibility on safety compliance, you can ensure that every worker is ready for the job at hand.

This visibility on worker readiness is a great way to unlock new value from your Honeywell equipment, so you can further reduce safety incidents, streamline compliance administration and improve productivity. And it's all backed by the long history of Honeywell developing software and other technology for companies' toughest challenges in aerospace, defense and process optimization. Now we're bringing our software expertise to industrial safety.
