Honeywell Safety Suite

Real-time visibility on workers' readiness for safe work

Safety managers, especially those in high-risk industries, need to ensure that workers comply with government regulation and corporate-issued safety policies. As part of this compliance, workers need to have equipment that has been inspected for safety and training that certifies them to complete certain tasks. However, many safety managers have an ad-hoc approach to compliance administration, involving a mix of paper-based systems, databases and mammoth spreadsheets, which can put the visibility, accuracy and reliability of safety data at risk. These ad-hoc compliance systems also hamper productivity. Safety managers may spend more than 50 percent of their time — in some cases all of their time — collecting, analyzing and reporting compliance information.

The Answer is Honeywell Safety Suite Worker Compliance.

Worker Compliance, a cloud-based solution for managing safety compliance. The solution is part of **Honeywell Safety Suite**, a software-as-a-service (SaaS) platform. Worker Compliance combines data about equipment safety and worker training into one centralized online interface, *providing real-time visibility on workers' readiness for a job*. This visibility includes an inventory of a company's personal protective equipment (PPE) and other assets — along with the compliance status of each piece of equipment, the worker assigned to it and the worker's training status.

Using the software on a desktop computer or mobile device, safety managers can:

- **Assess compliance.** Quickly determine whether PPE and other equipment have been inspected and are compliant with safety requirements.
- **Assign equipment.** Designate PPE and other equipment for certain workers.
- **Automate training administration.** Assign training to workers, automate registration and quickly see whether workers are compliant with training requirements.
- **Manage ongoing equipment inspections and safety observations.** Input data and create a centralized audit trail for compliance — for every asset and worker.

TECHNICAL DATA

Features

KEY FEATURES:	APPLICATIONS:
Optimized User Interface	Intuitive, easy to use, and accessible on mobile devices.
Visual Data Management	Actionable data in a format that is easy to digest. Quickly enables faster, more accurate decision making.
Email Alerts and Notifications	Proactive approach to action upcoming / current non-compliance indicators.
RFID / Barcode Scanning	Scan any equipment / PPE with either RFID tags or barcodes. Ability to scan multiple assets in a single operation.
Automatic Imports of Asset Data for Honeywell RFID tagged PPE.	Seamlessly imports the serial number, item description, recommended steps for inspection, recommended inspection schedule and other key information from the Honeywell product database
Offline Inspections on Mobile Device	Mobile Application on Android and iOS (Tablet device) to manage equipment / PPE inspections (sequential, non-sequential) at locations with no internet connectivity.
Bulk Data Management	Microsoft Excel templates to facilitate efficient import of information associated with multiple workers, multiple assets and multiple trainings.
Document Management	Associate certifications with workers, specification sheets with assets / equipment and roster sheets with trainings.
Multiple Sites / Locations Management	Manage compliance across multiple sites in the organization using a single subscription.
Multiple Languages	Supports English, French and German languages.
Reports and Excel Compatible	On Demand Reports in Microsoft Excel and scheduled Email reports.
Self Service Administration	Manage Roles / Permissions, Job Functions, Sites, Product Families and Inspection Templates to align with the current operational processes.
Secure Cloud Environment	Reliable data storage with 24/7 access from any internet connection; nothing installed and no consumption of local IT resources.
Product Support	Professional support by Honeywell via Email.

TECHNICAL DATA

Specifications

SYSTEM COMPATIBILITY	
Browsers Supported	Internet Explorer, Google Chrome, Safari
Browser Versions	Internet Explorer 11 and above Google Chrome V 44.0.2403.155 and above, Safari version 9.0 and above
Tablet Type	8 inch plus screens
Tablet OS Version	Android 4.3, iOS 9 and above
Attachment Max size – Image	5MB
Attachment Max size - others	10MB

RFID AND BARCODE SCANNING	
Scanners	HID keyboard emulation enabled scanner (USB/Bluetooth) with UHF RFID and 2D Barcode
RFID Tags	Class I Gen 2 Passive RFID Tags
Barcodes	1D and 2D Barcodes
RFID Multi Scanning	Yes

SECURITY	
Application Security Compliance	OWASP Top 10 risks tested
Password Encryption	SHA256 Hashing Algorithm
Secure Data Transfer Protocols	HTTPS, SFTP

HOSTING INFRASTRUCTURE	
DATA Center Compliance	SAS 70 Type II (or) SSAE 16
Instance	Multitenant with logical data separation
Data backup	Daily

Like other software-as-a-service offerings, Safety Suite enables subscribers to pay only for the services they use — without upfront capital expenditures.

The Worker Compliance offering pricing is a tiered pricing structure based on the number of workers registered and managed using the offering. The subscription price is an annual subscription price.
