

SAFETY FROM THE GROUND UP

HONEYWELL CONSTRUCTION SOLUTIONS

Construction companies and workers work in extremely dangerous environments every day.

In fact, 20% of all work-related fatalities occur in construction and of those, falls are the most common.¹

With hazards present from clock in to clock out, not wearing the appropriate PPE – or wearing it incorrectly – can lead to workplace injury or even fatality, both of which are not only emotionally and physically devastating, but extremely costly as well.

Now more than ever, construction workers putting their life on the line need the best, most reliable head-to-toe protection and the training on how to use it properly. Because at the end of the day, the biggest priority for you – and for us – is making sure your crew gets home safely to their families.

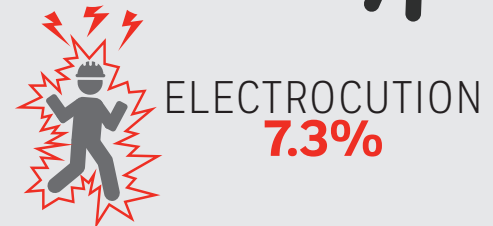

BUILDING THE FUTURE OF SAFETY FROM THE GROUND UP

On a construction site – where human lives are at stake – we know that safety is important every second you're on the jobsite. That's why we're in the business of helping you protect your crew from head-to-toe with the most comfortable PPE that works smart and works hard, just like your workers do. Honeywell construction solutions are designed to ensure that safety is always on – even in the face of your most demanding projects. From excavation and steel erection to drywall and tenant finish, Honeywell has the products and experience to protect every worker in every trade.
